

**PERNUMA METALLPRINT E, ES**  
Electric Numbering and Embossing Machines

**Electric machines for embossing different kinds of metal with a not too high strength (e.g. aluminium, copper, brass, gold, silver etc.) as well as cardboard, plastic, leather, film etc.**

The machines can be equipped with a numbering head (even a double numbering head) or a type holder.

The machines are supplied with an adjustable side and rear gauge in their standard version in order to facilitate an exact positioning of the material to be marked.

The pressure can be adjusted to the thickness and kind of the various materials that are processed.

The machines are also available with a quick-change device (SV) - when several numbering heads or type holders are used in one machine.  
(Attention: Modified fitting heights!)

The embossing is released by a foot switch that belongs to the standard equipment.

**PERNUMA METALLPRINT ES**

Heavy-duty version of the METALLPRINT E with strong gear, metal stand and foot switch for mass markings respectively when a machine is required for continuous operation.

**Optional Features**

- Heating for the embossing tool
- Automatic foil or ribbon advance for colour markings
- Special aligning or insertion devices
- Reel suspension
- Additional punching and cutting of the material to be embossed
- Automatic feeding system
- Automatic release

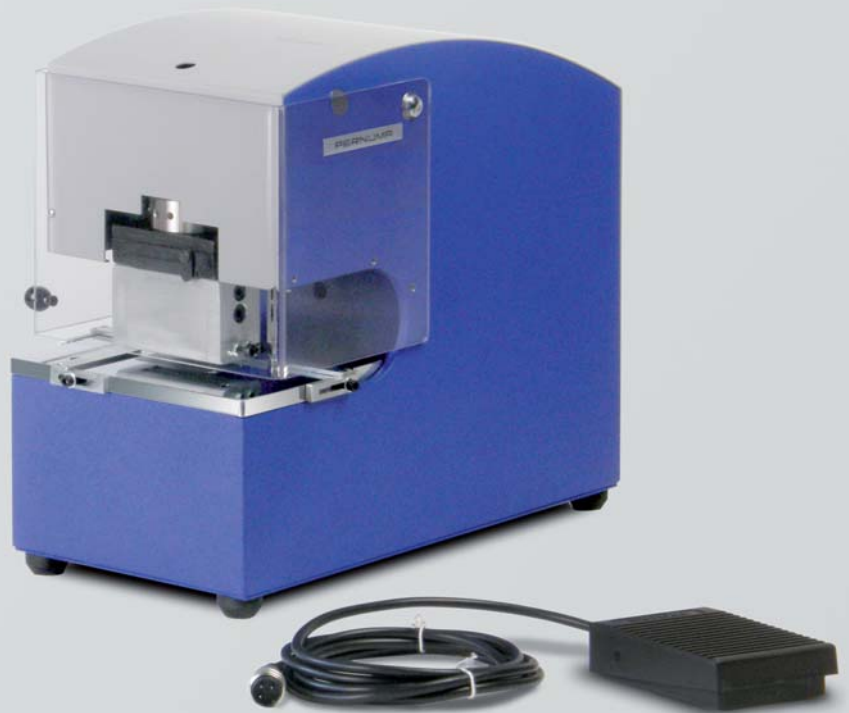

Type holder

Numbering head manually adjustable

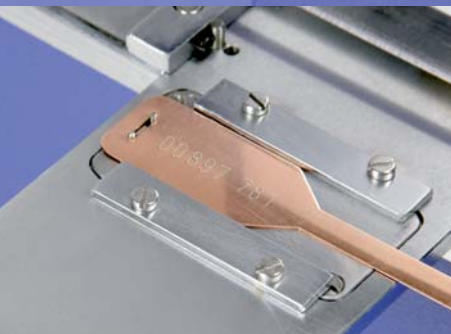

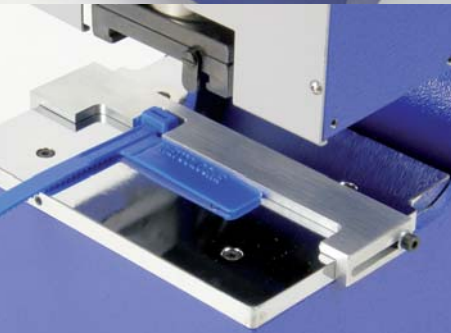

Numbering head adjustable by key-levers

Numbering head for automatic consecutive numbering

Type holder with quick-change device (SV)
